## Information Technology (IT) Committee ~ Dr. HO Chung Ping, MH

TaoYuan Project Progress – beta-testing stage

The development of the HKMA Clinic Management System (HKMA CMS 3.0) was proceeding smoothly. We were in “beta testing” stage with the aim to test the system to locate the possible bugs and identify areas that needed improvement in accordance with our specifications. In the past month, 5 doctors and some members of ISIA (our IT partner) had run through the beta-test of the CMS and provided valuable feedback to the Mobigator, our project developer. The system will be finalised soon and will be open to “pilot testing”.

In the pilot testing stage, the system will be expected to be essentially “complete” and the purpose of the pilot testing is to find out any unexpected bugs in the actual clinical usage. We shall need more members to take part in the testing so that the system

will be “perfect” on official launching.

We also take part in “Validation Platform” project of the eHealth consortium. Our aim is to test the feasibility of communicating with the future e-HR system through our CMS software. We shall be sending depersonalized medical data used for CMS3.0 tests for compatibility test of the platform in March/ April 2009. This will be an important step in the development of the e-HR. With bugs fixed and improved features, the CMS 3.0 will be an “all-purpose” software.

We shall be running a “Certificate Course on IT Usage in Medical Practices” towards the end of this year. The aim of the course is to introduce to our members the clinic management systems, with particular focus on our own CMS 3.0. The course will be free and open to all doctors.
